

Subject: REACH and ROHS compliance

Chassieu, July 16th 2021

Dear customer,

AEROMETALS is a trading company involved in the trade of metal materials. In the REACH-Compliance-Requirement a distinction is drawn between substances and articles. A substance according to the REACH-Compliance-Requirement is a chemical element and its compounds in natural form or melted / extracted by a process of production, including those additives which are necessary to ensure its stability. and impurities, occurred by the applied method, but with exception of solvents, which can be separated from the substance without influence on the stability or change of its compounding.

Hence AEROMETALS do not trade with substances, but only with articles. An article according to the REACH- Compliance-Requirement is a product which ends in a specific form, surface or figure, defined more by the function than by the chemical compound. This means that the products we deliver are not included in the list of substances that are REACH compliant.

The regulation RoHS 3 - 2015/863/EU concerns the trade with electrical and electronic equipment, which contains hazardous goods like lead, mercury, cadmium etc. AEROMETALS is a trading company, mainly involved in the trade with metal and metal alloys.

These metals and metal alloys do not exceed the maximum concentration values of the substances mentioned in annex II of this regulation. The products thus fulfil the requirements for the restriction of substances according to the EC Directive 2015/863/EU, i.e. the products are RoHS 3 compliant.

We stay at your disposal for any further information you may need.
